POOL Solutions

Sand Aid

Granular Clarifier for Swimming Pools

Active Ingredients:
Aluminum Sulfate 100%

KEEP OUT OF REACH OF CHILDREN
CAUTION

See First Aid and Additional Precautionary
Statements on Back Panel.

Net Weight 2 LBS.

Suspended particles in the pool water can make the water appear cloudy, turbid and discolored. When this product is added to the pool water it will combine with most of these solids and settle them to the bottom of the pool where they can easily be removed by the pool vacuum or by sweeping into the pool drain.

DIRECTIONS FOR USE

Before adding this product, determine the pH of your pool water with a suitable test kit. The pH of the pool water must be at least 7.8 for this product to work properly. If the pH is low, add pH Plus to adjust the pH upward.

Shut off the pool filter and broadcast this product across the surface of the pool evenly, at the rate of 1/4 lb. per 1,000 gallons of water. Do not agitate (or swim in) the pool until the suspended solids have settled to the bottom of the pool ... this may take overnight or longer. Do not swim in the pool until the settled materials have been removed.

Remove the settled material with your vacuum. Be sure that the filter is set on the vacuum to waste setting. Do not filter the water from the vacuum cleaner while removing settled solids from the pool. Start normal filter operation after all settled materials is removed from the pool. The use of this product will lower the pH of your pool water. After completion of the above procedures, test the pH of the pool water and adjust accordingly with pH adjustment chemicals to bring the pH within the desired range of 7.2 to 7.8.
