HAYWARD®

Installation, Operation & Service Procedures
Above Ground Pool Heater

Models H100ID1 & H100IDP1

Unit must be installed outdoors only and below an altitude of 2000 feet

FOR YOUR SAFETY

WARNING: If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

- Installation and service must be performed by a qualified installer, service agency or the gas supplier.
Section I. General Information

Important notice:

The instructions herein are intended for the use of a qualified technician, specifically trained and experienced in the installation of this type of heating equipment. Some states or provinces require that installation and service people performing the installation be licensed. If this is the case in the state or province where this heater is located, the contractor must be properly licensed. **WARNING:** Failure to comply with the appliance installation instructions and service Instructions in this manual may result in equipment damage, fire, asphyxiation or carbon monoxide poisoning. Exposure to products of incomplete combustion (carbon monoxide) can cause cancer and birth defects or other reproductive harm.

Conformance with codes:

The heater shall be installed in accordance with all local and state codes. The heater installation must conform to the latest edition of the National Fuel Gas Code ANSI Z223.1 and with the requirements of the authority having jurisdiction. Design Certification in the United States is in compliance with American National Standard Z21.56 (latest edition).

For Canadian installations, the heater must be installed in accordance with standards CAN/CGA B149.1 and B149.2 - INSTALLATION CODES FOR GAS BURNING APPLIANCES AND EQUIPMENT and/or local codes, and if applicable, Standard CSA C22.1 - CANADIAN ELECTRICAL CODE, Part 1.

Location of heater:

Locate the heater in an area where leakage of heat exchanger or connections will not result in damage to the area adjacent to the heater or structure. This heater must be installed at least five feet from the wall of an above-ground pool.

The heater shall not be installed with the top of the vent assembly within 10 feet below or to either side of any opening into the building.

Outdoor installation:

The following installation and service clearances must be maintained from surfaces to provide adequate air flow to the heater.

<table>
<thead>
<tr>
<th>Outdoor Installations</th>
<th>Left side - 10 inches</th>
<th>Bottom - Combustible floor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Top - Unobstructed</td>
<td>Right side - 10 inches</td>
<td></td>
</tr>
<tr>
<td>Front - 10 inches</td>
<td></td>

</tr>
</tbody>
</table>

Figure 1

An A.G.A. Certified main gas valve shutoff must be installed outside of cabinet and within 6 feet of the heater. Gas shutoff valve must have an inside diameter large enough to supply the proper amount of gas volume to the heater. **NOTES:** Do not use flexible appliance connectors on any gas connections unless the connector is A.G.A. approved for outdoor installation, is marked with the BTUH capacity (which must be equal to or greater than 100,000 BTUH), and the type of gas (Natural or LP) to be used.

Propane gas:

All propane tanks must be located outdoors and away from pool and in accordance with the standard for storage and handling of propane gas, ANSI/NFPA 58 (latest edition) and applicable local codes. If propane gas tank is installed underground, the discharge of the regulator vent must be above the highest probable water level. Propane tanks must be sufficient capacity to provide adequate vaporization for the full capacity of the equipment at the lowest expected temperatures. Consult a propane company expert for correct sizing.

Water piping:

This heater is designed for use with pool and spa/hot tub water only, as furnished by municipal water distribution systems. The warranty does not cover heater use with mineral water, sea, salt or other non-potable waters.

Do not install any restriction in the water pipe between heater outlet and pool/spa with the exception of a three-way switching valve and associated check valve. Blockage of water flow from heater return to pool may result in fire or explosion causing property damage, personal injury or loss of life.

Plumbing connections:

Water flow rate to the pool must be between 20 and 70 gpm. If flow rate exceeds 70 gpm an external by-pass valve must be installed. Figure 2 shows a typical heater installation.

![Typical Heater Installation](image)

**Electrical system:**

This heater is equipped with a standard 3-prong 120 volt cordset. The plug must be inserted into a GFI protected, watertight, outdoor receptacle rated for at least 10 amps. The heater must be electrically grounded and bonded in accordance with local codes, or in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70.

If the heater must be hard wired, open the junction box and disconnect the cord. Remove the cord and strain relief and wire the heater in accordance with local codes or the National Electrical Code.

The ignition system used to light the burners is a direct spark system which requires 120 volt AC current as does the blower motor. The system amp draw is 2 amps. It is strongly recommended that the heater be supplied with a constant power source. If remote operation is required, the heater should be controlled through the thermostat only.

Installation above or below water level:

This heater is supplied with a pressure switch factory set at 3.5 psi. If the heater does not operate and the pressure switch is at fault, the following procedure is recommended to adjust the switch:
Section II. Installer

Gas line testing:

The appliance and its gas connection shall be leak tested before placing in operation. The heater and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig. The heater must be isolated from the gas supply piping system by closing its individual manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig. Gas supply line must be capped when not connected. After pressure testing, reconnect the gas piping to the gas valve. Turn gas supply on and test all pipe and pilot tubing joints for leaks. Use a soap and water solution. Bubbles forming indicate a leak. Never use an open flame (match, lighter, torch, etc.) as a leak could cause an explosion or injury. Shut off gas and fix even the smallest leak immediately. Be sure to leak test all main burner fittings using the above procedure once the heater is in operation.

Gas pressure test procedure:

The following gas pressure adjustments are important to proper operation of the heater. Incorrect settings can cause improper operation.
1. Turn on the water and start heater following lighting instructions.
2. Using a manometer, determine the inlet gas pressure. The inlet gas pressure must not exceed 10.5" W.C. (water column pressure) for Natural gas or 13" W.C. for Propane gas. Exposure to higher pressures can damage the gas control valve, causing leaks or diaphragm rupture. This damage could result in fire, explosion or burner overfiring leading to carbon monoxide poisoning. The inlet gas pressure must not be below 3.0" W.C. for Natural gas and for Propane. The heater may fail to operate at low inlet gas pressures. If the inlet gas pressure is too high or too low, the installer must contact the gas supplier and request that the inlet pressure to the heater be adjusted.
3. Using a manometer, determine the gas operating pressure. Manifold pressure for both natural and propane gas is 2.0" W.C. The gas valve is preset to operate at this pressure, no adjustment is necessary.
Gas pipe size.

Follow local gas codes for proper gas line material selection (copper, iron or plastic etc.)

**LOW PRESSURE NATURAL GAS PIPE SIZING:**
(Based upon gas pressure of 0.5 psig or less and a pressure drop of 0.5" W.C.)

<table>
<thead>
<tr>
<th>Distance from Meter (Natural Gas)</th>
<th>Iron Pipe</th>
<th>Tubing</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to 25 feet</td>
<td>1/4&quot;</td>
<td></td>
</tr>
<tr>
<td>25 to 100 feet</td>
<td>3/4&quot;</td>
<td></td>
</tr>
<tr>
<td>100 to 200 feet</td>
<td>1&quot;</td>
<td></td>
</tr>
</tbody>
</table>

**LOW PRESSURE PROPANE GAS PIPE SIZING**
**"SINGLE STAGE":** (Based upon gas pressure of 11" W.C. inlet pressure and a 0.5" W.C. pressure drop)

<table>
<thead>
<tr>
<th>Distance from Tank (Propane)</th>
<th>Iron Pipe</th>
<th>Tubing</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to 25 feet</td>
<td>3/4&quot;</td>
<td>1/2&quot;</td>
</tr>
<tr>
<td>25 to 100 feet</td>
<td>1/2&quot;</td>
<td>3/4&quot;</td>
</tr>
<tr>
<td>100 to 200 feet</td>
<td>3/4&quot;</td>
<td>7/8&quot;</td>
</tr>
</tbody>
</table>

It is **VERY IMPORTANT**, when installing a propane heater on a two (2) stage regulation system, to follow the gas line sizing chart below—without exception.

**HIGH PRESSURE "TWO STAGE" SYSTEMS:**

**HIGH PRESSURE PROPANE GAS PIPE SIZING**
**"FIRST STAGE":** (Based upon gas pressure of 10 psig inlet pressure at a pressure drop of 1 psi.)

<table>
<thead>
<tr>
<th>Distance from outlet of 1st stage regulator to inlet of 2nd stage regulator</th>
<th>Iron Pipe</th>
<th>Tubing</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to 200 feet</td>
<td>1/2&quot;</td>
<td>1/2&quot;</td>
</tr>
</tbody>
</table>

**LOW PRESSURE PROPANE GAS PIPE SIZING**
**"SECOND STAGE":** (Based upon gas pressure of 11 inches W.C. inlet pressure at a pressure drop of 0.5 inch W.C.)

<table>
<thead>
<tr>
<th>Distance from outlet of 2nd stage regulator to inlet of gas valve</th>
<th>Iron Pipe</th>
<th>Tubing</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to 10 feet</td>

Section III. Consumer Operation & Maintenance

**FOR YOUR SAFETY — READ BEFORE OPERATING**

**General:**

Do not operate the heater without water flowing through it.

Do not use the heater if any part has been under water. Contact a qualified service technician to inspect the entire heater and replace any part of the control system or gas valve that was under water. If heater has been totally submerged in water, replace the entire heater.

**Pool/Spa water chemistry:**

See also Figure 5. The mineral content of swimming pool water increases daily due to addition of pool sanitizing chemicals and natural evaporation. Excess minerals will deposit on pool walls, in the filtration system, and in the heat exchanger tubes if the mineral content is too high.

Changing spa water regularly and maintaining correct chemical balance in pool/spa will keep the pool/spa safe and sanitary, and will protect heater and its warranty coverage. Purchase a good "DPD" water test kit and check the following chemical levels frequently:

**CHLORINE OR BROMINE** — Recommended level 1 to 4 ppm. Test before use.

**pH** — Recommended ideal level 7.4 to 7.6. **HIGH** readings reduce sanitizer efficiency. **LOW** readings are corrosive.

**TOTAL ALKALINITY** — 80 to 120 ppm. Test weekly during regular use. **LOW** readings are corrosive and cause rapid pH changes when chemicals are added.

**CALCIUM HARDNESS** — 200 to 400 ppm. Test whenever pool/spa is filled. **LOW** levels of hardness can be very corrosive.

Remember, addition of any chemicals can change levels of chloride, pH, and total alkalinity.

It is recommended that residential spa water be changed every 2 to 3 months to prevent water problems. Public spas may need to have the water changed every week, or even daily, depending on bather load.

**Using chlorinators and chemical feeders:**

Follow the instructions provided with any automatic or manual chlorinator and chemical feeder. If a chlorinator is used, it must be installed down stream from the heater in the pool return line. Install a check valve between the heater outlet and chlorinator to prevent chlorine from siphoning back into the heater. All chemicals must be introduced and diluted into the pool or spa water before being circulated through the heater. Do not place chlorine tablets or bromine sticks directly into the skimmer. High chemical concentrations may result when the pump is not running. High chemical concentrations cause very rapid corrosion of the heat exchanger. Such damage is not covered under warranty.

**Facts about water chemistry:**

1. **PROPER FILTRATION**
2. **PROPER CIRCULATION**
3. **DISINFECTION AND OXIDATION**
4. **pH CONTROL AND TOTAL ALKALINITY**
5. **ALGAE CONTROL**

What is **pH**? It is the measure of the acidity or alkalinity of water. As shown on this chart, it is a critical measurement.

Hayward recommends using a four way test kit to obtain:

1. **MIN./MAX. pH (7.2 - 7.8)**
2. **CHLORINE RESIDUAL** (1.0 - 3.0 PPM), BROMINE (2.0 - 4.0 PPM)
3. **TOTAL ALKALINITY** (80 - 100 PPM) for calcium, lithium and sodium hypochlorite, or (100 - 120 PPM) for sodium dichlor, trichlor, and bromine.
4. **CALCIUM HARDNESS** (200 - 400 PPM)
Heater operation:

Full lighting and shutdown instructions are included on the lighting instructions label installed inside the heater cabinet. This heater cannot be operated with the front door removed.

⚠️ WARNING: If you smell gas in the appliance area or near the floor stop, and follow instructions on front cover of this manual.
⚠️ NOTE: Do not use this unit below 40°F temperature. Do not operate heater while an automatic pool cleaner is in use.
⚠️ NOTE: This unit will not operate if water flow is insufficient. Make sure filter is clean.

⚠️ Warning:

Do not ingest alcohol or drugs during use or prior to using pool. Ingestion of such intoxicants can cause drowsiness which can lead to unconsciousness and subsequently result in drowning.
Do not heat pool water in excess of 102°F. A temperature of 100°F is considered safe for a healthy adult. Hotter water increases the risk of hyperthermia. Special caution is suggested for younger children.
Pregnant women beware! Soaking in water above 102°F can cause fetal damage during first three months of pregnancy (resulting in the birth of a brain damaged or deformed child). Pregnant women should adhere to the 100°F maximum rule.
Before entering the water, users should check the water temperature with an accurate thermometer; operating thermostats may err in regulating water temperatures by as much as four degrees.
Persons with a medical history of heart disease, circulatory problems, diabetes or blood pressure problems should obtain their physician’s advice before using spas or hot tubs.
Persons taking medications which induce drowsiness, such as tranquilizers, antihistamines or anticoagulants, should not use spas or hot tubs.
If the pool/spa is used for therapy, it should be done with the advice of a physician. Always stir the water before entering to mix in any hot surface water that might exceed healthy temperature limits and cause injury.
Do not tamper with controls, because scalding can result if safety controls are not in proper order.

Temperature controls:
The heater is turned “ON” and “OFF” and the water temperature is adjusted with the thermostat. Turning the thermostat all the way counterclockwise will turn the heater “OFF.” Turning the thermostat clockwise will turn the heater “ON” and adjust the temperature higher.
The memory stop provides a manual means of locking the desired maximum temperature setting of the water. Once the maximum setting has been determined, loosen the screw and rotate the stop to the desired location and retighten the screw.

Periodic inspection:

1. Periodically check the venting system on the heater. The venting areas must never be obstructed in any way and minimum clearances must be observed to prevent restriction of combustion and ventilation air.
2. Keep the entire pool area clean and free of all debris, combustible materials, gasoline and other flammable vapors and liquids. Remove any leaves or paper from around the heater.
3. Do not store chlorine, other pool chemicals or other corrosives in the vicinity of the heater.

Winterization:

Do not operate heater if the temperature falls below 40°F. Drain all water out of heater to prevent damage to heat exchanger during freezing weather.

Section IV. Qualified Technician - Servicing

General:

⚠️ WARNING: Do not attempt to repair any components of the heater. Do not modify heater in any manner. To do so may result in a malfunction which could result in death, personal injury or property damage. Check with consumer to see if any part of heater has been under water. Replace any part of the control system and any gas control which has been under water. Never attempt to use parts that have been previously used.
⚠️ CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

Burner cleaning:

If required, burners can be cleaned in the following manner:
1. Turn off the external gas valve to the heater.
2. Remove the gas manifold.
3. Remove the burners.
4. Brush burners with a wire brush and check that they are free of lint, dust and spider webs before each season of use. Burners with damaged ports must be replaced.

Gas valve replacement:

⚠️ WARNING: Do not attempt to repair gas valve. If found to be defective, replace entire valve. Attempts to repair it will void warranty.
1. Turn off main gas valve.
2. Disconnect wires to gas valve.
3. Unscrew gas valve from manifold.

Direct spark module:
The direct spark ignition module is the master control, processing the operational information from the other controls. When the thermostat calls for heat, the blower turns on for 10 seconds before the ignitor begins to spark. The ignitor begins sparking at the same time the main gas valve opens, which causes ignition of the main burner gas. If ignition does not happen within 10 seconds, the module locks out. To reset the module, the thermostat must be turned to the “OFF” position and back “ON.”

To replace the module:
1. Turn heater “OFF”.
2. Unplug heater.
3. Disconnect wires from the module.
4. Remove module retaining screws.
5. Replace module.

Combustion blower:
The combustion blower provides the air that mixes with the gas from the main burners for the combustion process. On initial start-up, the blower operates for 10 seconds to purge gas out of the heater. Then, the main gas valve opens, the ignitor sparks for a maximum of 10 seconds and the heater lights. The blower operates the entire time the gas valve is open.

Combustion blower replacement:
1. Turn pump, main gas valve, system switch and heater power “OFF”.
2. Remove screws retaining the main top.
3. Disconnect wires attached to the blower.
4. Remove external vent terminal.
5. Remove duct from blower to vent terminal.
6. Remove screws attaching blower to flue collector.
7. Replace blower.
8. Reverse above procedure for installation.
**Operating Instructions**

**FOR YOUR SAFETY READ BEFORE LIGHTING**

**WARNING:** If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance does not have a pilot. It is equipped with an ignition device which automatically lights the burners. Do not try to light the burners by hand.  
B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

**WHAT TO DO IF YOU SMELL GAS**

- Do not try to light any appliances.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone.
- Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to turn the gas control knob. Never use tools. If the knob will not turn by hand, do not try to repair it. Call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

E. Should over-heating occur, or the gas supply fails to shut off, turn off manual gas valve to the appliance.

**OPERATING INSTRUCTIONS**

1. STOP! Read the safety information above on this label.
2. Turn the thermostats on the control panel to the "OFF" setting.
3. Remove the heater front door.
4. This appliance is equipped with an ignition device which automatically lights the burners. Do not try to light the burners by hand.
5. Turn gas control knob to "OFF".
6. Wait five (5) minutes to clear out any gas. If you then smell gas, STOP!
7. Follow "D" in the safety information above on this label.
8. If you don’t smell gas, go to next step.
9. Turn gas control knob to "ON".
10. Replace the heater front door.
11. Turn the thermostats on the control panel to the desired setting.
12. If the appliance will not operate, repeat steps 2 thru 9. If the appliance will not operate after 1 try, follow instructions "TO TURN OFF GAS TO APPLIANCE" and call your service technician or gas supplier.

**TO TURN OFF GAS TO APPLIANCE**

1. Turn thermostat knob on control panel to the "OFF" setting.
2. Remove the heater front door.
3. Turn gas control knob to "OFF".
4. Replace the heater front door.

---

**CONSIGNES DE FONCTIONNEMENT**

1. **ATTENTION** lisez les consignes de sécurité qui précèdent sur cette étiquette.
2. Tourner les thermostats du tableau de commande au réglage "OFF".
3. Relier la porte avant de l'appareil de chauffage.
4. Cet appareil est pourvu d'un dispositif d'allumage qui allume automatiquement les brûleurs. Ne pas tenter d'allumer les brûleurs à la main.
5. Tourner le bouton de commande du gaz à la position "OFF".
6. Attendre cinq (5) minutes que tout gaz se dissipe. Arrêter si on sent alors une odeur de gaz. Suivre "D" dans les consignes de sécurité qui précèdent sur cette étiquette.
7. Tourner le bouton de la commande de gaz à la position "ON".
8. Remettre la porte avant de l'appareil de chauffage en place.
10. Si l'appareil ne fonctionne pas, répéter les étapes 1 à 9. Si l'appareil ne fonctionne pas après un nouveau essai, suivre les instructions "POUR COUPER LE GAZ À L'APPAREIL".

**POUR COUPER LE GAZ À L'APPAREIL**

1. Tourner le bouton du thermostat du tableau de commande au réglage "OFF".
2. Relier la porte avant de l'appareil de chauffage.
3. Tourner le bouton de commande du gaz à la position "OFF".
4. Remettre la porte avant de l'appareil de chauffage en place.

Limited heater warranty:

TERMS AND COVERAGE: We warrant our pool heater to be free from defects in workmanship and materials under normal use and service. Pursuant to this warranty and subject to the Conditions and Exceptions indicated below:

1. We will replace (cost of freight, installation, cost of fuel, and service labor at user's expense) or, at our option, repair any part or parts of the pool/spa heater which malfunction under normal use and service within two years from the date of original installation for single family residential users and one year for all other users.

2. In addition, if during a period of 30 days from the date of original retail purchase a covered part or purchased as a new part, we will cover the cost of labor for replacing those covered parts for single family residential users only.

LIMITATION ON IMPLIED WARRANTIES: We ARE NOT LIABLE FOR ANY CONSEQUENTIAL DAMAGES FOR BREACH OF ANY WRITTEN OR IMPLIED WARRANTY OF THIS PRODUCT. Implied warranties, including the WARRANTY OF MERCHANTABILITY and all other implied warranties that may arise from course of dealing or usage of trade imposed on the sale of this heater under the laws of the state are limited in duration to the term of two (2) years for single family residential users and one (1) year for all other users. There are no warranties which extend beyond the description on the face hereof. We shall not in any event be held liable for any incidental, indirect or consequential damages.

EXPENSE OF DELIVERY AND INSTALLATION: Each pool heater or replacement part to be furnished under this warranty shall be furnished at our nearest distribution center. We shall not pay or be responsible for shipping or delivery charges to the place of installation, nor for labor charges or other costs of removal or installation. Every defective heater or part replaced under this warranty shall become our property, and as such, must be returned to our distribution center with transportation charges paid by the user. Any replacement pool heater furnished under this warranty shall remain in warranty only for the unused portion of this warranty.

CONDITIONS AND EXCEPTIONS: This warranty applies only to the pool/spa heater as originally installed and for one year after installation by the original owner. This warranty applies only to heaters installed for SINGLE FAMILY RESIDENTIAL APPLICATIONS. (Heaters installed for commercial, multifamily and other uses will be warranted for a period of one year from date of installation.) It does not apply if the pool heater is installed in violation of any applicable code or ordinance, or is not installed, operated, or maintained in accordance with our instructions, or is misused, damaged by accident, weather, act of God, freezing, water void and/or excess pressure, altered or disconnected. It does not apply with respect to:

1. A heater not equipped with Certified AGA limit controls or equivalent pressure relief valve, installed in accordance with applicable ordinances.

2. A heater operated with settings in excess of, and/or with fuel not conforming to those shown on rating plate.

3. A heater on which the serial numbers have been altered, defaced or removed.

4. Leaks arising from defective installation.

5. Production of noise, odor or discoloration (rusty, etc.) water.

6. Leakage substantially contributed to by sediment, lime precipitate and/or other than normal dissolved solids (pH above 7.8) in the tank, copper tubes or water ways.

7. Leakage substantially contributed to by corrosive elements in the atmosphere (such as the storage of chlorine or other chemicals).

8. Leakage caused substantially or contributed to by corrosive pool water in an acid condition (pH below 7.2).

9. Damage caused substantially or contributed to by an external source of energy.

10. A pool/spa heater is a water containing device. Leakage of water from this device can be expected at some time due to malfunction or the limitations of the service life of various components. Do not install this product under circumstances where leakages from normal use will cause unacceptable damage. MANUFACTURER IS NOT RESPONSIBLE OR LIABLE FOR ANY COSTS INCURRED BY SUCH DAMAGE.

IN NO CASE ARE WE TO BE HELD LIABLE FOR DAMAGE TO SURROUNDING AREA OR PROPERTY CAUSED BY LEAKAGE OR MALFUNCTION.

HOW TO CLAIM UNDER THIS WARRANTY: The original owner, upon discovering the defect, must present the completed warranty claim card with proof of purchase and verification of the claim to either the dealer or notify the Company in writing at either address:

Hayward Pool Products, Inc. 900 Faimount Avenue Elizabeth, NJ 07207

Hayward Pool Products, Inc. 2875 Pomona Boulevard Pomona, CA 91768

Upon receipt of such notification we shall decide whether to repair such parts or replace any pool heater, reserving at all times the right to inspect in order to verify any claimed defect. We also reserve the right to have our representatives make any inspections, repairs, or to furnish replacements. This warranty is intended as a legal binding obligation of the Company, enforceable in the courts. This warranty may give you specific legal rights which may vary from state to state.

LIMITATION ON LIABILITY: All intended representations have been expressly set forth in this document. This warranty may not be extended by oral or any other additional representations, written sales information, drawings or otherwise. Our liability, in the event of leakage or other malfunction, is strictly limited to repair or replacement of the defective heater or part, as provided herein and the Company is not responsible hereunder for incidental or consequential property damage or personal injury, or loss of use of the heater, inconvenience or other consequential or incidental costs or damages. The Company makes no other warranties, nor authorizes any person or firm to assume for us, any further liability or obligation in connection with the sale, installation, use, maintenance or assistance of the heater.

SAFETY WARNING: Pool heaters are high producing appliances and to avoid damage or injury in the event of possible overheating of the outer jacket (1) no materials should be stored against the jacket and (2) core should be designed to accommodate heat from the heater. Electric ignition heaters and electric heaters must have the power shut off when making adjustments or servicing. Inside contact with the heater. UNDER NO CIRCUMSTANCES SHOULD FLAMMABLE MATERIALS, SUCH AS GASOLINE OR PAINT THINNER, BE USED OR STORED IN THE VICINITY OF THE HEATER OR IN ANY LOCATION FROM WHICH FUMES COULD REACH THE HEATER. FOR YOUR COMFORT, ENJOYMENT AND SAFETY, PLEASE READ THE ENCLOSURED OPERATING INSTRUCTIONS CAREFULLY.

FireTile™ five year limited warranty:

TERMS AND COVERAGE: This warranty is an extended limited warranty applicable to the FireTile™ components used in the combustion chamber of your pool/spa heater. All terms, conditions, limitations and exceptions of the regular pool heater limited warranty remain in force, apply to this warranty, and are incorporated herein by reference.

In the event that this special FireTile™ limited warranty, we will replace (cost of freight, installation, cost of fuel, and service labor at user’s expense) any components of your pool/spa heater made of FireTile™ which fail from defects in workmanship and materials under normal use and service in a single family residential application for a period of five (5) years.
