Installation and Operation Data

Installation and Operation Manual

Jandy® Cartridge Pool/Spa Filters

Models CJ200 and CJ250

⚠️ WARNING

FOR YOUR SAFETY - This product must be installed and serviced by a professional pool/spa service technician. The procedures in this manual must be followed exactly. Improper installation and/or operation can create dangerous high pressure which can cause the filter lid to be blown off, possibly causing death, serious injury or property damage. Improper installation and/or operation will void the warranty.

Before installing this product, read and follow all warning notices and instructions that accompany this filter. Failure to follow warning notices and instructions may result in property damage, serious injury, or death.

Section 1. Safety Information

1.1 Important Safety Warning

---

**WARNING**

NEVER OPERATE OR TEST THE FILTER SYSTEM AT MORE THAN 50 PSI.

THIS FILTER OPERATES UNDER HIGH PRESSURE. WHEN ANY PART OF THE CIRCULATING SYSTEM, i.e., FILTER, PUMP, VALVE(S), CLAMP, ETC. IS SERVICED, AIR CAN ENTER THE SYSTEM AND BECOME PRESSURIZED WHEN THE SYSTEM IS RESTARTED. PRESSURIZED AIR CAN CAUSE THE FILTER LID TO BE BLOWN OFF WHICH CAN RESULT IN DEATH, SERIOUS PERSONAL INJURY OR PROPERTY DAMAGE. TO AVOID THIS POTENTIAL HAZARD, FOLLOW ALL OF THE INSTRUCTIONS IN THIS MANUAL.

---

1.2 General Safety Instructions

**ATTENTION INSTALLER:**

This manual contains important information about the installation, operation and safe use of this product. This information should be given to the owner/operator of this equipment.

1. Before repositioning valve(s) and before beginning the assembly, disassembly, or adjustment of the clamp, or any other service of the circulating system; (A) turn the pump off and shut off any automatic controls to ensure the system is not inadvertently started during servicing; (B) open the air release valve; (C) wait until all pressure is relieved (air will have stopped flowing from the air release valve).

2. Whenever installing the filter clamp follow Section 3.4 of this manual, "Locking Ring Installation".

3. Once service on the circulation system is complete, follow Section 4 of this manual, "Start-up and Operation".

4. Maintain circulation system properly. Replace worn or damaged parts immediately.

5. Be sure that the filter is properly mounted and positioned according to these installation instructions.

6. Do not pressure test above 50 PSI. Pressure testing must be done by a trained pool professional.

---

SAVE THESE INSTRUCTIONS.
Section 2. General Information

2.1 Introduction

This manual contains information for the proper installation and operation of the Jandy® CJ Cartridge Filters. Procedures in this manual must be followed exactly. To obtain additional copies of this manual contact us at 707.776.8200 ext. 237. For address information see back cover.

2.2 Description

Cartridge filters do not require sand or diatomaceous earth as the filter medium. Instead they contain a filter cartridge element which is easily removed for cleaning or replacement.

Dirty water flows into the filter tank and is directed through the filter cartridge. The debris is collected on the surface of the cartridge as the water flows through it. The water will travel through the central filter core towards the bottom of the filter into the lower manifold. Clean water is returned to the swimming pool through the filter outlet port at the tank's bottom.

As debris collects in the filter, the pressure will rise and water flow to the pool will diminish. The filter will eventually become so plugged with debris that it will be necessary to remove the filter cartridge and clean it (see Section 6 "Cleaning the Filter").

NOTE A filter removes dirt and other suspended particles but does not sanitize the pool. Pool water must be sanitized and chemically balanced for clear water. The filtration system should be designed to meet local health codes. At a minimum, the system should turnover the total volume of water in your pool two to four times in a 24 hour period.

2.3 General Requirements

1. For best overall performance place the system as close to the pool as possible.
2. The filter should be located on a level concrete slab so that the orientation of the valve outlets and the pressure gauge are convenient and accessible for the installation and operation of the unit.
3. Protect the filter from the weather.
4. If fitting a chlorinator and/or any other device into the filtration plumbing circuit, great care must be exercised to ensure that the appliance is installed in accordance with the Manufacturer’s Instructions and any standards that may exist.

5. Use barrel unions to connect each component of the water conditioning system for future servicing. All Jandy filters come with these type of fittings.

2.4 Specifications and Dimensions

See Table 1 and Figure 1.

</table>

WARNING

The maximum working pressure for this filter is 50 psi. Never subject the filter to pressure exceeding 50 psi, even when conducting hydrostatic pressure tests. Pressures above 50 psi can cause the lid to be blown off.

6. When performing hydrostatic pressure tests or when testing for external leaks of the completed filtration and plumbing system, ensure that the maximum pressure the filtration system is subjected to does not exceed the maximum working pressure of any of the components within the system.

Figure 1. Dimensions, CJ Cartridge Series Filter
Section 3. Installation Instructions

3.1 Filter Location

1. Select a well-drained area, one that does not flood when it rains. Damp, non-ventilated areas should be avoided.

2. Provide solid mounting for the filter and pump system. Install system on a concrete slab or solid concrete blocks to avoid risk of settlement. Do not use sand to level the filter as the sand will wash away. Filter systems can weigh up to 300 lbs.

3. Install electrical controls at least five (5) feet from the filter. This will allow enough room to stand away from the filter during start-up.

4. Allow sufficient clearance around the filter to permit a visual inspection of the clamp ring (see Fig. 2).

5. Allow sufficient space above the filter to remove the filter lid and filter element for cleaning and servicing.

6. Position the filter to safely direct water drainage. Align the air release valve to safely direct purged air or water.

7. If the filter is to be installed below the water level of the pool, isolation valves should be installed on both the suction and return lines to prevent back flow of pool water during any routine servicing that may be required.

3.2 Filter Preparation

1. Check carton for damage due to rough handling in shipment. If carton or any filter components are damaged, notify carrier immediately.

2. Carefully remove the accessory package. Remove the filter tank from the carton.

3. A visual inspection of all parts should be made now. See parts list on page 13.

4. Wrap teflon tape around the threads on the pressure gauge and install it into the threaded adapter on top of the filter tank (see Fig. 3).

5. Wrap teflon tape around the threads on the air release valve and install it into the threaded adapter on top of the filter tank (see Fig. 3).

NOTE Teflon tape is included in the accessory bag.
3.3 Filter Installation

1. This filter operates under pressure. When the locking ring is properly seated and the filter is operated without air in the water system, this filter will operate in a safe manner.

2. If doubt exists as to the pressure which the system will be subjected to, install an ASME approved automatic Pressure Relief Valve or Pressure Regulator in the circulation system rated for the lowest working pressure of any of the components in the system.

3. Place the filter on the concrete pad, lined up with the inlet and outlet pipes.

4. To reduce pressure losses, 2" (minimum) piping is recommended for plumbing the system. Never exceed the manufacturer's maximum recommended filter flow rates.

5. For best efficiency use the fewest possible number of fittings. This will prevent a restriction of the water flow.

6. Make all plumbing connections in accordance with local plumbing and building codes. Filter unions are provided with an o-ring seal. Use silicone based lubricants on the o-rings to avoid damage. **Do not use pipe joint compound, glue or solvent on union threads.**

7. Keep piping tight and free of leaks. Pump suction line leaks may cause air to be entrapped in filter tank or loss of prime at the pump. Pump discharge line leaks may show up as equipment pad leaks or air being discharged through the return lines.

8. Support the inlet/outlet pipes independently to prevent any undue strains.

9. Place the union nut over the pipe and connect the pipes to the union tailpieces using PVC glue. Do not use teflon tape or pipe dope on any union threads. Put the o-ring in the tailpiece and assemble the unions to the filter tank.

**NOTE** If required by local code to bolt the filter to the equipment pad, order part # R0359100 (Anchor Brackets).
3.4 Locking Ring Installation
1. Be certain the o-ring is in position in the lower tank half. Press the filter lid over the lower half until seated. Lubricating the o-ring with a silicone based lubricant will help with installation (see Fig. 5).
2. Put the locking ring over the filter and thread it onto the filter. Turn the locking ring clockwise until you hear it snap over the tabs on the lower half of the tank.

**WARNING**
Follow these instructions carefully. Improper locking ring installation can cause the filter lid to be blown off which can result in death, serious personal injury or property damage.

---

**Section 4. Start-Up and Operation**

**WARNING**
NEVER start pump while standing within five (5) feet of the filter. Starting the pump while there is pressurized air in the system can cause the filter lid to be blown off, which can cause death, serious personal injury or property damage.

**WARNING**
NEVER operate the filter system at more than 50 psi of pressure. Operating the filter system in excess of 50 psi can cause the filter lid to be blown off, which can cause death, serious personal injury or property damage.

**Caution**
DO NOT operate filter at water temperatures above 120° F (65.5° C). Water temperatures above the manufacturer's recommendations will shorten the life span of the filter and void the warranty.

4.1 New Pool and Seasonal Start-up
1. Turn off the pump and switch off the circuit breaker to the pump motor.
2. Check that the filter drain plug is in place and tight.
3. Check that the tank locking ring is properly seated and tight.
4. Open the pump hair/lint pot lid and fill the pump basket with water to prime the system. Replace the pump lid. (You may have to do this a few times on new and seasonal start ups).
5. Open the air release valve on top of the filter (do not remove the valve).
6. Be sure to open any isolation valves that were installed in the system.
7. Stand clear of the filter and start the pump to circulate water through the system. When all the air is bled from the system and a steady stream of water starts to come out of the air release valve, close the valve.
8. Watch the pressure gauge to be sure that the pressure does not exceed 50 psi. If the pressure approaches 50 psi, immediately turn the pump off and clean the filter cartridges. If the pressure remains high after cleaning the filter, refer to the troubleshooting guide on page 12 for possible causes and solutions.
Section 5. Filter Disassembly and Assembly

**WARNING**
NEVER attempt to assemble, disassemble or adjust the filter when there is pressurized air in the system. Starting the pump while there is any pressurized air in the system can cause the filter lid to be blown off, which can cause death, serious personal injury or property damage.

5.1 Filter Element Removal

1. Turn off the filter pump and turn breaker off.
2. Open air release valve on top of the filter tank to release all pressure from inside the tank and system (see Fig. 6). Close any filter isolation valves on the system to prevent flooding.
3. Open the filter tank drain. When the filter tank has drained, close the drain.
4. Remove the locking ring by squeezing up on the handles and turning it counterclockwise.
5. Remove the top of the filter. Inspect the tank o-ring for damage. Clean or replace the o-ring as necessary.
6. Remove the Upper Bearing Assembly from the top of the filter. Remove the filter element from the tank bottom and clean or replace as necessary.
7. Place the new or cleaned filter element into the tank bottom. Place the Upper Bearing Assembly on top of the filter.
8. Use a Silicone based lubricant on the new or cleaned o-ring and place the o-ring onto the tank bottom.
9. Place the tank top onto the tank bottom. Be sure the tank halves are seated properly.
10. Install the locking ring (see Section 3.4, "Locking Ring Installation").
11. Follow steps 5 thru 8 under Section 4.1, "New Pool and Seasonal Start-Up".

![Figure 6. Filter Element Removal](image-url)
5.2 Changing the Outlet Port

1. Follow steps 1 thru 6 under Section 5.1, "Filter Element Removal".

2. Remove the three (3) screws holding the Breather Tube Support. Slide the Support off of the tank rib. The bottom of the Breather Tube will stay in the Plenum (see Fig. 7).

3. Remove the single screw holding the Plenum in place. Grasp the Plenum Adapter and pull the assembly out of the tank. Clean the bottom of the tank (see Fig. 8).

4. Rotate the Plenum Assembly to the desired position. With the Plenum Assembly in place, push down until it is seated.

5. Place the screw into the Plenum Assembly and hand tighten the screw.

6. Slide the Breather Tube Support onto the correct rib inside the tank bottom. Place the three (3) screws into the support and hand tighten the screws. Do not use a wrench.

7. Follow steps 7 thru 10 under Section 5.1, "Filter Element Removal".

8. Follow the steps in Section 4.1, "New Pool and Seasonal Start-Up".

9. You will need to relabel the Inlet, Outlet and Drain ports. Label kits (part #R0560600) are available from Jandy by calling 707-776-8200 ext. 237.

**WARNING**

It is important that the breather tube is fully seated into the adapter. If the breather tube is not installed properly, unwanted high pressure can cause the filter lid to be blown off, which can cause death, serious personal injury or property damage.

---

![Figure 7. Changing the Outlet Port, Cross Section](image)

![Figure 8. Changing the Outlet Port](image)
Section 6. Maintenance

6.1 General Maintenance
1. Wash outside of filter with a mild detergent or TSP (tri-sodium phosphate) and water. Rinse off with a hose. Do not use solvents to clean the filter, solvents will damage the plastic components of the filter.
2. Check pressure during operation at least once a week.
3. Remove any debris from the skimmer basket and hair/lint pot on pump.
4. Check pump and filter for any leaks. If any leaks develop, turn off the pump and call a qualified pool service technician.
5. Product safety signs or labels should be periodically inspected and cleaned by the product user as necessary to maintain good legibility for safe viewing.
6. Product safety signs or labels should be replaced by the product user when a person with normal vision, including corrected vision, is no longer able to read the safety signs or label message panel text at a safe viewing distance from the hazard. In cases where the product has an extensive expected life or is exposed to extreme conditions, the product user should contact either the product manufacturer or some other source to determine means for obtaining replacement signs or labels.
7. Installation of new replacement safety signs or labels should be in accordance with the sign or label manufacturer's recommended procedure.

6.2 Pressure Gauge

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maintain your pressure gauge in good working order. The pressure gauge is the primary indicator of how the filter is operating.</td>
</tr>
</tbody>
</table>

1. During operation of the filtration system, check the pressure gauge/air release assembly for air or water leaks at least once a week.
2. Keep the pressure gauge in good working order. If you suspect a problem with the gauge, Jandy recommends you call a qualified service technician to do any work on the filter/pump system.

6.3 Cleaning the Filter Cartridge
1. Turn off the filter pump and turn breaker off.
2. If the filter is installed below pool level, close any filter isolation valves to prevent flooding.
3. Open the air release valve on top of the filter and wait for all air pressure to be released.
4. Open filter tank and remove cartridge element (see Section 5.1 "Filter Element Removal". Place it upright in an area suitable for washing.
5. Use a garden hose and nozzle to wash each pleat of the element.

NOTE Algae, suntan oil, calcium and body oils can form coatings on filter element which may not be removed by normal hosing. To remove such materials, soak the element in de-greaser and then a de-scaler. Your local pool shop will be able to recommend suitable products.
6. Replace the cartridge back into the filter tank. Inspect the o-ring for cracks or wear marks. Place the o-ring back onto the filter tank bottom. Replace the top of the tank. Place the filter locking ring on the filter and tighten (see Section 3.4 "Locking Ring Installation").
7. Reopen the isolation valves if they were closed.
8. Stand clear of the filter, start the pump and circulate the water until water sprays out of the air release valve. Close the air release valve. The filter is now back in operating mode.

Section 7. Winterizing
1. Turn off the pump and circuit breakers.
2. Open air release valve on top of the filter. Do not remove.
3. Loosen the drain plug at the base of the filter to ensure that the tank is empty.
4. Drain circulation system of all water.
5. Cover the system with a tarpaulin or plastic sheet to protect it from the weather.
Section 8. Troubleshooting

1. For a list of common problems and solutions see the Troubleshooting Guide below.

2. Jandy recommends that you call a qualified service technician to do any work on the filter/pump system. For technical service call 707.776.8200, ext. 260.

Section 10.  Head Loss Curves

10.1 Jandy® Cartridge Filter, CJ Series

![Head Loss Curve for CJ200/250 Filter](image-url)
LIMITED WARRANTY

Thank you for purchasing Jandy® pool and spa products. Waterpik Technologies (manufacturer of Jandy products, including Laars® pool and spa heaters, Air Energy Heat Pumps, and Clormatic Electronic Chlorine Generators) warrants all parts to be free from manufacturing defects in materials and workmanship for a period of one year from the date of retail purchase, with the following exceptions:

- AquaLink® RS units installed with Jandy Surge Protection Kits will be covered for two years.
- NeverLube® valves are warranted for the life of pool and/or spa on which they were originally installed.
- AquaPure™ Electronic Chlorine Generator Electrolytic Cells carry a 5 year limited warranty on a prorated basis.

This warranty is limited to the first retail purchaser, is not transferable, and does not apply to products that have been moved from their original installation sites. The liability of Waterpik Technologies shall not exceed the repair or replacement of defective parts and does not include any costs for labor to remove and reinstall the defective part, transportation to or from the factory, and any other materials required to make the repair. This warranty does not cover failures or malfunctions resulting from the following:

1. Failure to properly install, operate or maintain the product(s) in accordance with our published Installation, Operation and Maintenance Manuals provided with the product(s).
2. The workmanship of any installer of the product(s).
3. Not maintaining a proper chemical balance in your pool and/or spa [pH level between 7.2 and 7.8, Total Alkalinity (TA) between 80 to 120 ppm, Total Dissolved Solids (TDS) less than 2000].
4. Abuse, alteration, accident, fire, flood, lightning, rodents, insects, negligence or acts of God.
5. Scaling, freezing, or other conditions causing inadequate water circulation.
6. Operating the product(s) at water flow rates outside the published minimum and maximum specifications.
7. Use of non-factory authorized parts or accessories in conjunction with the product(s).
8. Chemical contamination of combustion air or improper use of sanitizing chemicals, such as introducing sanitizing chemicals upstream of the heater and cleaner hose or through the skimmer.
9. Overheating, incorrect wire runs; improper electrical supply; collateral damage caused by failure of O-Rings, DE grids, or cartridge elements; or damage caused by running the pump with insufficient quantities of water.

LIMITATION OF LIABILITY:
This is the only warranty given by Waterpik Technologies. No one is authorized to make any other warranties on Waterpik Technologies' behalf. **THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE AND MERCHANTABILITY. WATERPIK TECHNOLOGIES EXPRESSLY DISCLAIMS AND EXCLUDES ANY LIABILITY FOR CONSEQUENTIAL, INCIDENTAL, INDIRECT OR PUNITIVE DAMAGES FOR BREACH OF ANY EXPRESSED OR IMPLIED WARRANTY.** This warranty gives you specific legal rights. You may also have other rights which vary by state or province.

WARRANTY CLAIMS:
For prompt warranty consideration, contact your dealer and provide the following information: proof of purchase, model number, serial number and date of installation. The installer will contact the factory for instructions regarding the claim and to determine the location of the nearest designated service center. If the dealer is not available, you can locate a service center in your area by visiting www.jandy.com or by calling our technical support department at (707) 776-8200 extension 260. All returned parts must have a Returned Material Authorization number to be evaluated under the terms of this warranty.
