The advantages are distinctly clear

Family, friends and even Fido can put a strain on your pool filtration system. Keeping your water in perfect condition is a job best left to Sta-Rite, the leader in filtration technology. To enjoy the cleanest, clearest water in your backyard pool, install a PLD Series Mod D.E. Aboveground System, featuring diatomaceous earth (D.E.) filtration. Diatomaceous earth, a natural substance, is so fine it traps dirt and debris as small as five microns (1/10 the width of a human hair). Body oils, suntan lotions, pollens, dust and even some bacteria are trapped in the filter, leaving behind sparkling clear, healthier water.

- Single module replaces complicated multi-grid assemblies that are difficult to clean and reassemble.
- Balanced-flow tank design maximizes the use of the module’s surface area to trap more dirt and reduce the frequency of cleaning.
- Precision-engineered pump components significantly reduce sound levels and won’t intrude on those peaceful, quiet times.

The advantages are perfectly clear. Enjoy the distinct benefits of the PLD Mod D.E. system.
A dynamic duo

The PLD Series Mod D.E. Aboveground System incorporates a performance-matched pump and filter, which increase energy efficiency and reduce sound emissions. And, with your leisure time in mind, the components are designed to need only occasional maintenance.

Less maintenance . . . YES!
The balanced-flow tank design directs water through both sides of the filter module, which dramatically increases filter surface area and dirt-loading capability. And that means a longer time between cleanings.

Easy cleaning
For quick cleaning, simply remove the tool-free tank lid and spray-rinse the module* while it’s still in place. In minutes, it’s ready for another season.
