One cleaning for an entire season?

The System:3® Mod Media™ filters from Sta-Rite® handle 2-3 times more dirt than other filters to deliver maintenance-free performance for up to a full season. Featuring perfectly balanced flow and an integral manifold design, these filters are engineered to deliver the ultimate in labor savings. System:3 Mod Media filters are ideal for inground pools, inground hot tubs and water features.

- Patented balanced-flow tank hydraulics direct water through each side of the filter module for uniform dirt loading, no clogging, and long, unattended operation.
- Complete media coverage combined with shallow pleats for greater dirt holding capacities, longer filter cycles and less cleaning.
- Shallow pleat design also permits quick and thorough cleaning—just rinse the module with a hose.*

An Eco Select™ Choice

Water flows very efficiently through the System:3® Mod Media™ cartridge filters, often allowing the use of smaller pumps or lower pump speeds to minimize energy use. And when you rinse cartridges rather than backwash, you can significantly reduce water use, too.

The Eco Select brand identifies our “greenest” and most efficient equipment choices.

As the global leader in pool and spa equipment manufacturing, we strive to provide greener choices for our customers. We hope you’ll join us in embracing more eco-friendly poolscapes by choosing Eco Select products for your swimming pool.

*Modules used in conjunction with certain pool & spa sanitizers may require soaking in special cleaning solutions.
Performing to a higher standard

Based on extensive research in filtration and media science by Sta-Rite®, System3® Mod Media™ filters make Ultra-Capacity Filtration™ a reality. Unlike conventional “cartridges,” these filters combine a patented balanced flow and integral manifold design, plus an easily cleaned media element. Modular filter tanks permit quick change of filter media. The result is a filter system that not only requires less frequent cleaning, but is also easy to clean.

The System3 Mod Media Filter is constructed of Dura-Glas™ high-density composite resin to weather the elements for long, dependable life. And its sleek, contemporary appearance and matte black finish looks attractive in any pool setting.

Dirt-Loading Comparison

Handles 2-3 times more dirt than other media-type filters—up to an entire season without cleaning!

Ultra-Capacity Filtration

Balanced flow tank design assures debris is evenly collected by the media—no clogging and long runs between cleanings.

1 Operating at this GPM will provide the longest filter cycles combined with the best and greatest dirt-loading capacity.

Operating Limits—Maximum continual operating pressure is 50 psig. For poolspa (bather) applications, the maximum operating water temperature within the filter is 104°F (40°C).

One-year limited warranty. See warranty for details.
