Note: The control unit (PN: SP3220VSC) is designed to be used exclusively with the TriStar 2.7 THP 3-phase pump (PN: SP322063EEV). The control unit should not be used with any other pump.

Note: These are general system curves that are dependent on plumbing size, size and number of plumbing fittings and whether your filter is clean. Performance on your pool might vary.

Maximizing hydraulic performance while minimizing energy consumption.

Now your energy bill can relax, too.

The superior new TriStar Energy Solution™ variable-speed pump and control is proof that high performance doesn’t have to come at the expense of high efficiency. Excellent performance and six programmable speeds deliver superior water quality while lowering your energy consumption from 30% to 70%.

Set your pool to “fun.”

Control your water flow and your electric bill at the same time.

Energy savings

Contrary to popular belief, when it comes to filtration pumps, bigger is NOT better! It is not about horsepower, it is all about water flow. Running your filtration pump at slower speeds for longer periods of time can save you up to 30% to 70% on your electric bill. And because you are moving the water more slowly and under less pressure, your pump will be quieter and your entire filtration system and plumbing will last longer. By customizing each speed to each pool function, you consume just enough electricity to perform each task – filter your water, disperse chemicals, operate an automatic cleaner, and adjust spa or water feature flow.

Step up to Pro Logic™ from Goldline® Controls and remotely select speeds.

With Pro Logic, you can control your filtering times, pool lights, heater, chlorine generator and all the other equipment around your pool, remotely. The best part is, you can do all these things from inside your home or by the touch of your Aqua Pod® handheld... so you can heat up your spa and adjust the jets to just the right flow before you even step outside.

*Electrical consumption will vary depending on hours of operation, the size of your pool’s plumbing, number and size of plumbing fittings and whether your filter is clean. It is important to keep your filter clean to achieve maximum savings.

TriStar Energy Solution

Superior control features and benefits:

• Pro Logic-compatible for remote programming and control
• Automatic default to low filter speed for superior energy management
• Integrated 24-hour time clock lets you customize function speed and duration
• Wall-mount control provides enhanced access
• Backlighted display panel for easy nighttime use
• Built-in memory recalls settings automatically
• 8-ft. pump connector cable
• Temperature protection
• Electrical loading protection

Superior pump features and benefits:

• Extremely quiet operation gives you more placement options for your equipment pad
• Supersized basket has extra leaf-holding capacity and extends time between cleanings
• Tri-lock design makes strainer cover easier to remove: no tools required
• 2" X 2½" unions for easy service, drain plugs that don’t require tools to remove and it is molded of corrosion-proof reinforced thermoplastic

The efficiency story isn’t just that you can reduce the TriStar’s speed, but that TriStar® is unsurpassed in hydraulic efficiency at any speed. Additionally, the TriStar pump is the most advanced residential filtration pump with a cam and ramp strainer cover that can be removed with just a quarter of a turn, a crystal-clear strainer cover to see when the basket needs to be emptied, a supersized basket to extend the time between cleanings, 2" X 2½ unions for easy service, drain plugs that don’t require tools to remove and it is molded of corrosion-proof reinforced thermoplastic.
